NONIN Health™

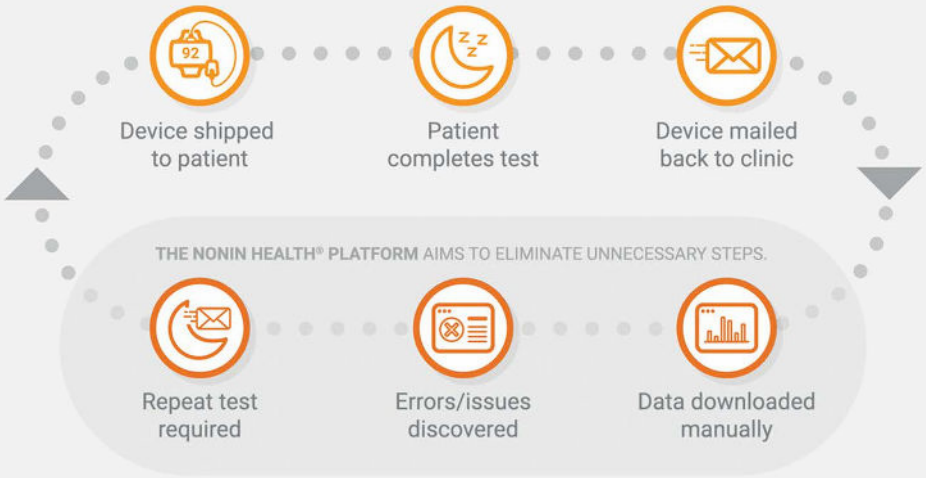
Simplify

Clinical Workflows with the Nonin Health® Platform

Efficient overnight oximetry testing starts with a streamlined workflow. The Nonin Health® platform reduces manual bottlenecks, helping you make faster clinical decisions.

The Old Way:
A Manual, Disconnected Process

Outdated processes create a repeated cycle of lost time, patient frustration, and added administrative burden.



(continued on back)

NONIN

The Nonin Health® Way:

Remote access to accurate data allows providers to review patient results before the device is returned, decreasing unnecessary delays and retests.

Device shipped to patient

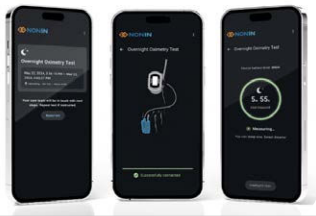
The pulse oximeter is shipped to the patient as usual, with instructions to take the test at home.

Patient completes overnight test

The patient wears the WristOx$_2$® Model 3150BLE while the Nonin Health app captures and prepares the data.

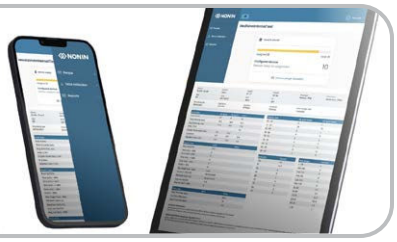
Data syncs remotely via Nonin Health app

With the tap of a button, the app securely uploads test results to the cloud, making them accessible to providers without waiting for the device's return.



Provider reviews data immediately online

Providers can log into the Nonin Health web portal to review test results as soon as they are submitted.



Errors caught early

Early access to data allows providers to identify incomplete or invalid test results before the device is returned.

Faster decision-making and fewer retests

Remote data review shortens turnaround times, reduces the need for repeat testing, and helps clinicians start treatment sooner.

Less time waiting. More time treating.
