alarms

**Nonin Model 7500
Pulse Oximeter**
with Hybrid Averaging™

Now available! Purchase the Model 7500 along with 6000C sensors as part of our new Sensor Management Program and save on the cost of each device purchased.

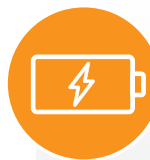

The ideal SpO₂ monitoring device for infant, pediatric, and adults in the home:

Easy to use

Designed with simplicity in mind for use by patients at home.

Large display, color-coded bar graph, and a saturation level-related audible tone at each pulse to quickly assess status. Optimal for first-time caregivers or new parents caring for infants on minimal sleep.

Long battery life

4x longer battery life compared to Masimo Rad-97.²

16-hour battery run time allows for flexibility and security with a 4-hour quick recharge. This means caregivers can use the Model 7500 in settings that require portability like going to and from physician appointments.

Durable

Supported by an industry-leading warranty of 3 years, versus the 1-year standard warranty of competitors.²

Designed for continued heavy, repeated use yet lightweight, compact, and portable.³ Durability in the home care setting is key, where people are living active lives around their medical equipment.

Customizable alarms

Nonin Hybrid Averaging technology was implemented to specifically address non-actionable alarms.

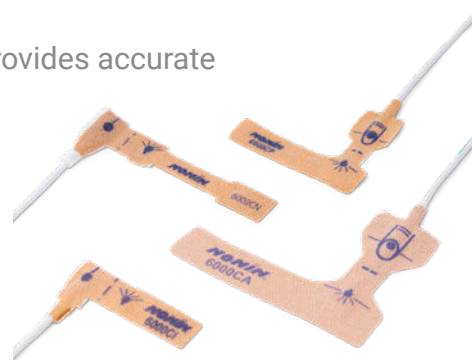

Nonin HA minimizes the impact of sudden SpO₂ value changes due to motion or other transient conditions resulting in reduced nuisance alarms and improved actionability.

Accuracy for peace of mind.

Paired with the 6000C series disposable sensor, the Model 7500 provides accurate oximetry readings for your patients even during motion¹.

The 6000C sensor design features a stretch, tear-resistant cloth for easier placement and fit on the patient, especially for hard-to-fit patients such as infants and neonates, helping ensure consistent readings by keeping the sensor in the proper position.

Available in four sizes ranging from neonatal to adult, it allows you to confidently monitor your patients at home.

Contact us to learn more about the Sensor Management Program or to schedule a demo to discover how the Model 7500 can support your oximetry monitoring program.
